

Alumni Mentorship & Mock Interview Platform

1. Problem Context & Overview

Connecting students with alumni working in specialized domains requires an intelligent matching mechanism, availability calendar booking, and structured post-interview scorecard recording.

Target Stakeholders / Actors: Student Mentee, Alumni Mentor

Requirements table

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall recommend alumni mentors to students based on domain matching (e.g., Embedded Systems, Cloud Computing) and facilitate one-click session booking.	High	Pass: Mentorship session is added to both calendars with meeting link; Fail: Double-booking of mentor slots.	Manual mentor search is slow and error-prone; automated domain matching increases the chance of a productive mentorship fit and drives platform adoption.
FR-002	Functional	The system shall allow alumni mentors to set and update their weekly availability slots for mentorship and mock interview sessions.	High	Pass: Updated slots reflect immediately in student search results within 5 seconds; Fail: Student is shown a stale/unavailable slot.	Mentors have limited free time; accurate availability prevents scheduling conflicts and wasted requests.
FR-003	Functional	The system shall allow alumni mentors to conduct a mock interview and submit a structured post-interview scorecard (technical, communication,	High	Pass: Scorecard is saved and visible to the student within 1 hour of session end; Fail: Scorecard data is lost or not linked to	Structured feedback is the core value delivered to students and must be reliably captured.

		and overall rating) for the student.		the correct session.	
FR-004	Functional	The system shall allow students to search and filter alumni mentors by domain, company, and availability before requesting a session.	Medium	Pass: Filtered results return only mentors matching all selected criteria; Fail: Irrelevant mentors appear in filtered results.	Reduces mismatch between student needs and mentor expertise, improving booking relevance.
FR-005	Functional	The system shall send automated email/SMS reminders to both student and mentor 24 hours and 1 hour before a scheduled session.	Medium	Pass: Reminder is delivered at both intervals for 100% of confirmed sessions; Fail: Reminder is missed or duplicated.	Reduces no-shows and last-minute cancellations for both parties.
NF-001	Non-Functional	All user profile data and feedback scorecards shall adhere to privacy guidelines and support soft-deletion within 24 hours of request.	High	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load	Student and alumni personal data is sensitive; timely deletion and secure handling are needed to comply with data-privacy expectations and build user trust.
NF-002	Non-functional	The platform's booking interface shall allow a student to find and book an available mentor slot in 3 clicks or fewer.	Medium	Pass: Usability testing with 5+ sample users confirms booking completes within 3 clicks; Fail: Any test user requires more than 3 clicks.	A frictionless booking flow directly drives student adoption and repeat usage.

Extract Actors & Use Cases:

Actors:

1. **Student Mentee** — searches for mentors, books sessions, receives reminders
2. **Alumni Mentor** — sets availability, conducts interviews, submits scorecards

Use Cases :

1. **Search Mentors by Domain** — from FR-004
2. **Book Mentorship Session** — from FR-001
3. **Set Availability** — from FR-002
4. **Conduct Mock Interview & Submit Scorecard** — from FR-003
5. **Send Session Reminder** — from FR-005

Alumni Mentorship & Mock Interview Platform

Use-Case Flow: Book Mentorship Session

Alumni Mentorship & Mock Interview Platform

Use Case ID:	UC-02
Primary Actor:	Student Mentee Secondary Actor: Alumni Mentor
Related FR:	FR-001 — Domain-matched mentor recommendation and one-click booking

Main Success Scenario

1. Student opens the “Find a Mentor” screen and filters by domain (e.g., Cloud Computing) and target company/industry.
2. System returns a ranked list of alumni mentors matching the domain, each showing name, expertise tags, and next 3 available slots.
3. Student selects a mentor's profile and picks one open slot from the mentor's live availability calendar.
4. Student confirms the request; system places a temporary hold (lock) on that slot for 2 minutes to prevent a race condition with another student.
5. System validates the student has fewer than 3 pending session requests, then permanently books the slot and creates a session record with a unique session ID.
6. System generates a video meeting link and adds the session to both the student's and mentor's calendars, including the meeting link and a pre-session prompt (include: Send Calendar Invite).
7. System displays a confirmation screen to the student with date, time, mentor name, and meeting link, and emails the same details to both parties.

Alternate Flow: Selected Slot Already Booked

- 4a. At step 4, the system attempts to place the temporary hold and finds the slot was locked or booked by another student a moment earlier.
- 4b. System immediately releases any partial hold and shows the student a “Slot no longer available” message.
- 4c. System refreshes the mentor's calendar and highlights the next 2 nearest available slots within the next 7 days.
- 4d. Student selects one of the suggested slots and the flow resumes at step 4, or the student cancels and returns to the mentor list.
